PDG Services provides mobile avionics services. Altimeter & transponder certifications, installations and troubleshooting.

Owner/Operator Paul Gardner has been in aviation for over 30 years starting in the US Navy, 1978, working on a bench troubleshooting/isolating and replacing defective components in complex autopilots systems supporting one of the Navy's most advanced electronics aircraft, the EA-6B, an electronics jamming aircraft. Earning an FCC General Radio Telephone license and later obtaining an A&P and eventually an IA license, now with a Repair Station License. With a Masters degree from the school of hard knocks, there aren't too many electrical/avionics systems that can't be figured out.

From a simple 2 place intercom to a full stack wiring with a new panel, experimental to certified aircrafts. PDG Services can save you time & money. We want to be your avionics shop.

"Being a small shop I can beat most shops installation prices with the experience to stand behind my work. We are a distributor for a lot of avionics systems and can acquire the rest."
Paul Gardner
